

Batching Ticket Generator

Floor Cheat Sheet

You enter the numbers — it builds the batches & tickets.

1 WHAT YOU ENTER

- **Total Cu Ft** — material the casting needs (required)
 - **Face Sq Ft** — sets how much is the face coat
 - **Cu Ft / 250 lb batch** — defaults to **4.28**
 - **Pigment reduction %** — defaults to **50%**
 - **Batched by & Notes** — print on the ticket
- Can auto-import Cu Ft & Face Sq Ft from inventory — only if **every** row has both filled in.

2 HOW MANY BATCHES

- Sand sizes: **250 / 150 / 100 lb**
- Uses the **fewest, largest** batches that cover the volume
- A leftover bit adds one more small batch
- **150 + 100 → combined into one 250** (one less batch to mix)
- Listed largest first

3 HOW BATCHES ARE LABELED

Direct Cast **50/50 split:** **FACE** + **FINAL BACK UP**.
No First Back Up.

Spray Up **FACE** fills the face volume (3/16" thick)
(Face Sq Ft entered) → **FIRST BACK UP** ≈ same again → rest
is **FINAL BACK UP**.

Spray Up First = **FACE**, last = **FINAL BACK UP**,
(no Face Sq Ft) middle = **FIRST BACK UP**.

4 RECIPE SCALING

- The **color log** is the recipe — it must have a **Sand** entry
- Every ingredient scales by **batch sand ÷ color-log sand**
- e.g. 100 lb batch off a 250 lb recipe = **40%** of everything

5 AUTOMATIC MATERIAL RULES ★

The generator applies these for you — you don't adjust them by hand.

Bulk Sand swap

Spray Up **back-up** batches show sand as "**Bulk Sand (Cowboy)**." Face uses the color-log sand.

Fibers → Cemfill

Spray Up: **back-ups** use Cemfill. Direct Cast: **all** batches use Cemfill. Amount = **18 lb per 250 lb batch** (scales down). Otherwise fiber is straight from the color log.

Pigment reduction

FINAL BACK UP always reduced (50% default).

FIRST BACK UP only if you **check the box**. **FACE** always full pigment.

6 MIX DAY TOTALS

- Adds up **all batches** so you know what to pull
- Uses the same sand / Cemfill / pigment rules above
- Grouped: **Dry Batch · Pigments · Additives**

7 THE PRINTED TICKETS

- **One page per batch**, color-coded:
FACE = Orange **FIRST B/U = Blue** **FINAL B/U = Yellow**
- Has Dry Batch, Pigments & Additives tables
- Blanks for Air/Water Temp & Ice on the floor
- **Slump target** bullseye — default **Face 6"**, **Back-up 5"**

8 WON'T PRINT IF...

- **No Total Cu Ft** entered
- **No Sand** entry in the color log

These guards stop a ticket from being built on missing info.

Bottom line: You give volume, face area & batcher — it decides batch count, labels each, scales the recipe, applies the rules, and prints a color-coded ticket per batch.
