

Standard Operating Procedure

Updating Project Files — File Racks Below TV

Rev: 1.0

Cadence: Weekly — after Friday Buy-In

Owner: _____

Keep the wall board, file dry boards, and file racks below the TV in sync with the current production week. Cross-check every list against the **Optimizer / Releasability spreadsheet** before posting.

1 UPDATE THE WALL DRY BOARD

Update the dry board on the wall with the current **week #** and the **dates of the week**.

2 LABEL THE FILE DRY BOARDS

Label each file dry board with the **week #** and a list of **all projects that have fabrication starting that week**.

Cross-check the **Optimizer / Releasability spreadsheet** to confirm the list is accurate.

3 FLAG NOT-RELEASED PROJECTS ★

Any project with a **not-released item** — **internal or external** — gets marked with a **RED star ★** next to its name.

4 SHIFT THE FILES

All files are “**shifted**” / **moved** after the **Buy-In meeting — every Friday**.

5 HOLD RED-STICKER BUY-IN FILES

Any buy-in files carrying **RED stickers** (not-released items) **stay in the office file rack** and are **placed on the desk** — so the outstanding items can be completed.

6 RE-RACK AFTER THE PLAN MEETING

After the **1st or 2nd half plan meeting**, place files in the **file racks below the TV** and **update the dry boards**.

Bottom line: Boards reflect the week, red star = not released, files shift every Friday, red-sticker files stay on the desk until Releasability / cleared, then re-rack below the TV. Project Files
